SEARCH REQUEST FORM

Scientific and Technical Information Center

Requester's Full Name: Annula Nalle Examiner #: 10002 Date: 6/13/2002
 Art Unit: 1752 Phone Number 305-2461 Serial Number: 10156458
 Mail Box and Bldg/Room Location: CP3-9836 Results Format Preferred (circle): PAPER DISK E-MAIL

If more than one search is submitted, please prioritize searches in order of need.

Please provide a detailed statement of the search topic, and describe as specifically as possible the subject matter to be searched. Include the elected species or structures, keywords, synonyms, acronyms, and registry numbers, and combine with the concept or utility of the invention. Define any terms that may have a special meaning. Give examples or relevant citations, authors, etc. if known. Please attach a copy of the cover sheet, pertinent claims, and abstract.

Title of Invention: _____

Inventors (please provide full names): _____

Earliest Priority Filing Date: _____

For Sequence Searches Only Please include all pertinent information (parent, child, divisional, or issued patent numbers) along with the appropriate serial number.

Please search for a compound representing formula TS-1 or TS-11 (attached) in a App. reference

Thank you.

Search Results

Feedback Form (Optional)

Scientific & Technical Information Center

The search results generated for your recent request are attached. If you have any questions or comments (compliments or complaints) about the scope or the results of the search, please contact *the EIC searcher* who conducted the search *or contact*:

Kathleen Fuller, Team Leader, 308-4290, CP3/4 3D62

Voluntary Results Feedback Form

➤ *I am an examiner in Workgroup:*

Example:

➤ *Relevant prior art found, search results used as follows:*

- ☐ 102 rejection
- ☐ 103 rejection
- ☐ Cited as being of interest.
- ☐ Helped examiner better understand the invention.
- ☐ Helped examiner better understand the state of the art in their technology.

Types of relevant prior art found:

- ☐ Foreign Patent(s)
- ☐ Non-Patent Literature
(journal articles, conference proceedings, new product announcements etc.)

➤ *Relevant prior art not found:*

- ☐ Results verified the lack of relevant prior art (helped determine patentability).
- ☐ Search results were not useful in determining patentability or understanding the invention.

Other Comments:

Drop off completed forms in CP3/4 - 3D62 .

AB	In recycling of the polymer moldings used for photog. products (e.g. housing of disposable cameras, film cartridges, etc.) as a part of materials such as pellets for newly-produced moldings , at least carbon black and antioxidants and optionally rubber-contg. resins are added during the process. Carbon black and antioxidants prevent deterioration of photog. properties, e.g. fog, abnormality in sensitivity, contrast, coloration, etc., and rubber-contg. resin prevents decrease in impact resistance. The recycled products also include spools and cartridges for films , magazines for photog. materials, etc.

AB	A front cover, a rear cover and a base portion are crushed, and further pelletized into a recycled plastic pellet. The recycled plastic pellet is used as a part of a molding material to produce mold plastic parts for a photosensitive material. When the molding material is melted, a thermoplastic resin is deteriorated by heat or modified. When the thermoplastic resin is deteriorated in the above manner, the photosensitive material reacts with the thermoplastic resin to form decompd. products having bad influence on photog. characteristics. In order to prevent the deterioration by heat, oxidn. inhibiting materials are added, and to absorb the decompd. products, C blacks are added to the thermoplastic molding material.

AB	<p>The title packaging material comprises a thermoplastic resin film layer contg. 1-40 wt.% of zeolite with water content .ltoreq.15% and 0.01-10 wt.% of a lubricant. The thermoplastic resin may contain .gtoreq.1 moisture-controlling agent, deoxidn. agent, formaldehyde scavenger, and HCN scavenger. A blend of master batch pellets contg. .gtoreq.1 of additives in a high conc. and dilg. matrix polymer pellets is melt-mixed at a resin temp. of 150-350.degree. by using an extruder with a screw having an effective length/outer diam. ratio of 10-50 and then molded at a draw ratio (lip clearance/film thickness) of 3-100 by using a molding machine having a lip clearance of 0.7-5 mm to form the resin film layer. A packed product is also claimed, in which a photosensitive material is packed in a moisture-proof bag with moisture permeability .ltoreq.10 g/m2.24 h formed by heat-sealing the resin film each other. The packaging material can be produced inexpensively using polyolefin resins as main constituents and shows improved burning properties and applicability to recycling system.</p>

AB The title compn. useful for **molding films** and
 containers used in **packaging** photosensitive materials comprises
 a thermoplastic (e.g., ethylene copolymer) **resin**, .gtoreq.1
 lubricant, an antioxidant, an org. nucleating agent, and a dripproofing
 agent which inhibits and equalizes the bleeding-out of the lubricant,
 antioxidant and the nucleating agent. Thus, a container for
photog. film was **molded** from a mixt. of
 ethylene-propylene random copolymer (3.2% ethylene) 60, ethylene-propylene
 block copolymer (21% ethylene) 38.9, oleic amide (lubricant) 0.10,
 glycerol monostearate (dripproofing agent) 0.2, 1,3,2,4-
 (dibenzylidene)sorbitol (org. nucleating agent) 0.1, CaCO3 (inorg.
 nucleating agent) 0.2%, TiO2 0.3%, Irganox 1010 (phenolic antioxidant)
 0.1, and Irganox 168 (P-contg. antioxidant) 0.1%. When the container was
 stored in a cold (10.degree.) room for a long period of time and taken
 out, water drops did not form on its surface.

- ST **packaging plastic** photosensitive material; container
photog film propylene copolymer; dripproof container
compn propylene copolymer; antifogging agent glycerol monostearate;
glycerol monostearate antifogging agent container; nondripping
packaging polyolefin photog film
- IT **Photographic films**
(packaging of, resistant to migration of lubricants,
polyolefin compns. for)
- IT Carbon black, uses
RL: USES (Uses)
(polyolefin **packaging** for **photog.** materials contg.,
resistant to migration of lubricants)
- IT Containers
(resistant to migration of lubricants, for photosensitive materials,
polyolefin compns. for)
- IT **Packaging materials**
(thermoplastic **resins** contg. migration inhibitors, for
photog. film)
- IT Amides, uses
RL: USES (Uses)
(fatty, bis-, lubricants, polyolefin compn. for resistant to migration
of lubricants **packaging** of photosensitive materials contg.)
- IT Alkenes, **polymers**
RL: USES (Uses)
(**polymers**, compn. for **packaging** photosensitive
materials contg., resistant to migration of lubricants)
- IT **Plastics, molded**
RL: USES (Uses)
(thermo-, **packaging** for **photog.** materials from,
resistant to migration of lubricants, compns. for)
- IT 490-23-3 **6683-19-8**, Irganox 1010 31570-04-4, Irganox 168
RL: USES (Uses)
(antioxidant, thermoplastic compn. for **packaging**
photosensitive materials contg., resistant to migration of lubricants)

	PATENT NO.	KIND	DATE	APPLICATION NO.	DATE
PI	JP 01038454	A2	19890208	JP 1987-194087	19870803
AB	Title compns., useful in prepg. radiation-sterilizable disposable syringes, surgical dressings, food packages , etc., are prepd. from propylene polymers 100, hindered amines contg. triazine rings 0.01-1.0, P-contg. antioxidants 0.01-1.0, and dibenzylidenesorbitols 0.01-1.0 part. Polypropylene 100, poly[[6-[(1,1,3,3-tetramethylbutyl)amino]-1,3,5-triazine-2,4-diyl][(2,2,6,6-tetramethyl-4-piperidyl)imino]hexamethylene[(2,2,6,6-tetramethyl-4-piperidyl)imino]] (I) 0.1, bis(2,4-di-tert-butylphenyl) pentaerythritol diphosphite 0.05, 1,3:2,4-dibenzylidenesorbitol 0.25, 2,5-dimethyl-2,5-di-tert-butylperoxy)hexane 0.01, and Ca stearate 0.1 part were mixed and injection-molded to give a sheet having yellowness index -0.1 and 7.4%, tensile strength 375 and 351 kg/cm ² , elongation >400 and 166%, and Izod impact strength 3.7 and 2.8 kg-cm/cm, as prepd. and after exposure to 5 megarads of .gamma.-rays and storage for 10 days at 100.degree., resp., vs. 0.2 and 7.5, 375 and 291, >400 and 4, and 3.5 and 0.8, resp., for a sheet contg. bis(2,2,6,6-tetramethyl-4-piperidyl) sebacate instead of I.
